Sanitation Co-Lead – People, Planning & Administration

Job purpose

Own the people and administrative systems required to recruit, organise and retain the Sanitation team, ensuring volunteer applications, communications, rostering, records and planning processes remain organised and responsive throughout the year.

Primary ownership

This Co-Lead would drive:

- recruitment advertising and volunteer re-engagement;
- applicant communications and application management;
- Portal administration;
- event roster construction;
- ticket allocation administration;
- volunteer communications;
- Sanitation records and Drive organisation;

- administrative maintenance of purchasing and procurement records;
- volunteer performance/history records;
- coordination of volunteer feedback after the event;
- general Volunteer Manual ownership;
- administrative coordination of documentation;
- maintaining visibility of deadlines and outstanding actions across the team.

Managing documentation, coordination, applications, communications, the roster and Portal are all assessed as High workload, concentrated across September–January.

Event contribution

This person still rotates through Duty Lead coverage, participates in training and can act operationally onsite.

The role should never become office-centric with no paddock understanding/experience.

Expected contribution profile

- Active year-round, with the heaviest workload generally falling between September and January.
- High contribution through recruitment, applicant management, volunteer communications, rostering, Portal administration and planning administration.
- Expected to participate onsite during final event readiness, volunteer/Shift Lead training, Burn operations and Duty Lead coverage.
- Expected to retain practical paddock familiarity rather than operating as an office-only role.

2027 current-holder availability: approximately 4–5 days before the Burn to support final Build and event-readiness activities.

Sanitation Co-Lead – Build & Site Logistics

Job purpose

Lead Sanitation's physical Build and site logistics programme, ensuring toilets, Sanitation-owned physical assets and site facilities are positioned, prepared, functional and ready before the event. This role coordinates closely with Infrastructure, Plumbing, Town Planning, contractors and the other Sanitation Co-Leads where specialist or cross-department support is required.

Primary ownership

This Co-Lead would drive:

- Build task planning;
- supervision of Build volunteers;
- deployment of Kiwiburn-owned portaloos;
- handwashing station setup and placement;
- menstruation station physical setup and placement;
- physical renovations and repairs;
- conduct the physical onsite stocktake during Build;
- identify missing or broken physical equipment and Build-specific requirements, and record these gaps in the shared stock/asset register;
- physical improvement projects;
- Town Planning coordination on placement/access;
- coordinate onsite contractor access, drop-off and physical positioning of rented portaloos;
- physical movement/placement of compostable toilet blocks in consultation with the Compost Co-Lead;
- Build & Packdown period coordination of specialist support;

The workload profile is very concentrated. Build volunteer supervision is rated as Very High workload, with portaloo deployment, menstruation-station setup and toilet placement also carrying significant Build-period workload.

**Significant Build and Packdown contributions will be taken into account when allocating Duty Lead coverage during the Burn.*

Expected contribution profile

- Moderate year-round planning and coordination, with a highly concentrated workload during the January Build period.

- Expected to have significant early-January onsite availability and to coordinate Build volunteers and physical site setup.
- Expected to participate in Burn operations and Duty Lead coverage, with substantial Build and Packdown contribution recognised when Duty coverage is allocated.
- Maintains enough year-round visibility to plan Build requirements, site dependencies and physical improvement work before arriving onsite.

Sanitation Co-Lead – Compost, Assets & Stewardship

Job purpose

Maintain the long-term health, safety and functionality of Sanitation's composting systems and physical assets, with particular responsibility for the worm farm, compostable toilets, working bees and year-round asset stewardship.

Primary ownership

This Co-Lead would drive:

- worm farm stewardship;
- worm farm inspections and maintenance planning;
- compostable toilet systems;
- barrel condition and readiness;
- compost toilet preparation and shutdown;
- compost procedures and training;
- sanitation-specific contamination/H&S procedures in collaboration with Site Safety;
- asset condition assessments;
- asset register ownership;
- planned maintenance;
- working-bee Sanitation priorities;
- physical asset storage condition;
- compost-related improvement projects;
- long-term maintenance requirements;

This role also carries specialist event-readiness responsibilities such as compost training and safe handling procedures.

**Relationship with Build*

*Build owns **how physical infrastructure gets installed or repaired**.*

*Compost/Assets owns **what condition the compost/assets systems need to be in and how those systems should operate**.*

Moving a compost toilet block = Build primary.
Determining where/how that compost system needs to operate = Compost primary.
Designing a better physical movement system = joint project.

Expected contribution profile

- Periodic year-round onsite responsibility to perform inspections at working bees, maintenance planning and asset stewardship.

- High contribution around working bees and Build, particularly for worm-farm condition, compost-system readiness and sanitation asset maintenance.
- Carries specialist event-readiness responsibilities including compost procedures, training and safe-handling requirements.
- Expected to participate in Burn operations, Duty Lead coverage and Packdown, particularly where compost systems and Sanitation-owned assets require specialist oversight.

Sanitation Co-Lead – Event Operations & Logistics

Job purpose

Design and coordinate Sanitation's event operating system so that Shift Leads and volunteers can run routine sanitation services independently, with Co-Leads required primarily for exceptions, escalations and higher-level decisions.

Primary ownership

This Co-Lead would drive:

- Event Operating Plan;
- Shift Lead development;
- Shift Lead Handbook;
- Shift Lead briefings;
- Duty Lead roster coordination;
- Can-Am operating/induction system;
- radio procedures;
- shift escalation rules;
- overall stock forecast, event consumable quantities and routine stock-cache system;
- consolidation of Build stocktake findings and operational needs into the shared procurement plan;
- coordination of operational procurement requirements within the approved budget and purchasing process;
- portaloo contractor relationship management, including requirements, booking, quantities, servicing schedule, contact details and additional servicing;
- live servicing arrangements;
- event logistics;
- Duty Lead handover/logging system;
- operational incident logging;
- Packdown coverage planning;
- portaloo contractor Packdown collection and handover.

This role must own the operating system, not personally operate everything. The Event Operations Co-Lead is responsible for designing, maintaining and coordinating these systems; routine delivery should be delegated to trained Shift Leads, volunteers and the current Duty Lead wherever appropriate.

The Event Operating Plan and Duty Lead coverage are both high-intensity responsibilities, with the operational workload peaking in the final planning period, during the Burn and into Packdown.

Expected contribution profile

- Increasing workload from late in the year through the Burn, with particularly high responsibility during final event planning and readiness.
- Strong onsite involvement during the event, focused on maintaining the systems that allow Shift Leads and volunteers to operate independently.
- Owns preparation of live operational systems but does not become the default person executing routine shift work or carrying all Duty Lead coverage.
- Expected to contribute to Packdown planning and contractor/service handover after the Burn.
