Job Description

Yu07u nSanitation Co-Lead

Facilitator and Department: Infrastructure Facilitator — Infrastructure

Why Does This Role Exist?

The Infrastructure Department exists to support the planning, development, operation and maintenance of the physical systems and shared infrastructure required for Kiwiburn.

The Sanitation team within Infrastructure exists to help keep Kiwiburn safe, functional and enjoyable by coordinating toilet and sanitation services, hygiene supplies, composting systems and volunteer operations required before, during and after the event.

The role of Sanitation Co-Lead exists to collaboratively guide and support the Sanitation team throughout the year and on site. The Co-Leads work together to plan, improve and deliver Sanitation services, support volunteers, maintain team knowledge and systems, coordinate with other Kiwiburn teams, and ensure leadership support throughout Build, the Burn and Packdown.

All Sanitation Co-Leads hold equal standing and shared responsibility for the overall success of the team. Co-Leads take the lead in agreed areas of work, while the distribution of responsibilities may change as team capacity, individual interests, availability, capability and the needs of each year's event evolve .

What Is The Team Structure?

The Sanitation team operates through a collaborative Co-Lead structure. The number of Co-Leads may change depending on team capacity and operational requirements. The leadership work currently spans four broad focus areas:

- **Coordination** — people, planning, communication, volunteer coordination and administrative systems that keep Sanitation organised.
- **Logistics** — site logistics, Build and Packdown coordination, physical setup, contractor/site requirements and practical delivery of Sanitation assets.
- **Stewardship** — care, safe use, maintenance and development of Sanitation assets, composting systems and related resources.
- **Operations** — systems, training, knowledge sharing and operational processes required to deliver Sanitation services effectively during the event.

These focus areas describe where each Co-Lead generally takes the lead, not the limits of what they may contribute to. They are not fixed positions or rigid silos, and responsibilities may be redistributed between Co-Leads by agreement.

How Are The Responsibilities Shared?

The Co-Lead team agrees how responsibilities are distributed each year. Each area should have clear ownership, appropriate cover and enough documentation for another Co-Lead to maintain continuity when the primary owner is unavailable.

Co-Leads are expected to maintain enough understanding of the wider Sanitation operation to provide continuity and cover where appropriate. Providing cover may include following documented plans, coordinating routine tasks, maintaining communications, supporting volunteers and escalating issues appropriately. It does not require a Co-Lead to undertake specialist or technical work outside their knowledge, training or competence.

Where a responsibility requires specialist knowledge or judgement, it should only be transferred to another Co-Lead who has, or has developed, the appropriate capability. If specialist expertise is unavailable within Sanitation, the covering Co-Lead should follow documented escalation pathways and seek support from the relevant Kiwiburn team where available.

All Co-Leads are expected to keep the procedures, plans, contacts and escalation pathways for the areas they primarily own clear and current so that routine work can continue without relying on one person's memory or availability.

What Does This Role Entail?

As a Sanitation Co-Lead, you will:

- Lead and support the Sanitation team in achieving its goals for the annual Kiwiburn event.
- Work collaboratively with the other Sanitation Co-Leads, with equal standing in team leadership and decision-making.
- Take primary responsibility for agreed areas of work while maintaining awareness of wider Sanitation activities.
- Collectively ensure that all critical Sanitation functions have clear ownership and adequate cover, including when an individual Co-Lead is unavailable.

- Keep the other Co-Leads informed of decisions, changes, risks or dependencies that may affect the wider Sanitation operation.
- Support or provide cover for other Co-Leads where appropriate, using shared documentation, established procedures and team knowledge to maintain continuity.
- Maintain clear, current and usable documentation for the areas you primarily own, including procedures, plans, task information, relevant contacts and escalation pathways.
- Identify activities that require specialist knowledge or judgement and make sure their safety requirements, limits and escalation pathways are clearly understood and documented.
- Participate in team planning, volunteer selection, event readiness and post-event review.
- Recruit, support and communicate with Sanitation volunteers and help create an inclusive, welcoming and well-organised volunteer experience.
- Communicate and consult with your team and wider Kiwiburn teams, as appropriate, on key decisions that affect them, and feed back to the Infrastructure Facilitator where required.
- Help identify opportunities to improve Sanitation systems, assets, volunteer processes, documentation and event delivery.
- Participate in the shared event Duty Lead/on-call roster, providing operational leadership and escalation support during agreed periods.
- Contribute to the annual Sanitation Afterburn report and post-event review.
- Assist in creating a collaborative and inclusive team culture where people are inspired to contribute and make a difference for the Kiwiburn community.

Focus Areas Capabilities

Each focus area benefits from a different combination of skills and knowledge. Co-Leads are not expected to have expertise across every area, but the Co-Lead team collectively needs sufficient capability across the following:

Coordination — Strong organisational and administrative capability, including volunteer coordination, communication, rostering, record keeping, documentation, managing competing priorities and putting systems in place that help the wider team operate effectively.

Logistics — Practical hands-on capability, such as experience with building, repairs, DIY, tools, site work or similar environments; confidence assessing what materials,

equipment and practical support are needed to complete physical tasks safely and effectively.

Stewardship — Knowledge or experience relevant to composting, worm farming, waste systems, compostable toilets, environmental management or related areas. A person taking primary ownership of specialist Stewardship systems must either already hold the necessary knowledge or be willing and able to independently develop it, including seeking reliable external guidance where required.

Operations — Strong planning, process-development, knowledge-sharing and people-management capability, ideally with experience in event operations, logistics, training, volunteer coordination or similar environments. This area requires the ability to turn operational knowledge into clear procedures, training and workable systems.

What Shared Experience And Qualities Are Needed In This Role?

- Strong communication and collaboration skills, with the ability to work constructively as part of a shared leadership team.
- Comfortable taking ownership of agreed responsibilities while keeping others informed and asking for support where required.
- Good organisational, planning and problem-solving skills.
- Able to manage changing priorities and make practical decisions in a busy volunteer environment.
- Project and time management skills for yourself and the people or projects you support.
- Willingness to learn about the wider Sanitation operation, follow established procedures and provide appropriate cover outside your usual focus area when required.
- Comfortable working with volunteers with different levels of experience, confidence and availability.
- Aware and proactive in managing your own capacity, including communicating early when workload or life commitments affect your ability to deliver.
- Comfortable learning and using systems such as Google Drive, Slack and Kiwiburn Portal, as well as other volunteer/rostering tools, with regular access to a computer and internet.
- Available and responsive regularly year-round via email and Slack, or able to ensure there is adequate cover when unavailable.

- Willing to work collaboratively with Infrastructure and other Kiwiburn departments.
- Understanding of Te Tiriti o Waitangi (Treaty of Waitangi) and how it relates to the Kiwiburn Organisation. Please refer to the Memorandum of Understanding for more information.
- A positive, motivated, inspired attitude and a cheeky twinkle in your eye!

On Site Capability

Co-Leads are expected to develop a broad working understanding of Sanitation operations and undertake relevant training so they can support the wider team, follow established procedures and provide continuity across focus areas where appropriate.

Some Sanitation responsibilities require specialist technical or practical knowledge. Co-Leads are not expected to undertake work outside their competence simply to provide cover. Where specialist expertise is required, the appropriate Co-Lead or another suitably experienced Kiwiburn team should be consulted.

Individual physical ability should not prevent someone from contributing effectively as a Co-Lead. Tasks may be shared or allocated according to skills, accessibility requirements, training and capacity, provided the Co-Lead team collectively maintains appropriate operational coverage.

What Would Be Helpful To Bring To This Role?

- Previous experience coordinating, leading or supporting a team of people with different workloads and priorities — bonus points if they are volunteers!
- Prior volunteering for Kiwiburn, onsite or year-round.
- Familiarity with Kiwiburn's organisational structure and event environment.
- Experience in event operations, volunteer coordination, practical site work, environmental systems, documentation, training or other areas relevant to the Co-Lead focus you are interested in.
- Experience creating clear processes, documentation or training material.
- Interest in improving systems rather than simply repeating how things have previously been done.
- Desire to serve the burner community.

Who Else Will I Be Working With At Kiwiburn?

- Infrastructure Facilitator;

- Other Sanitation Co-Leads;
- Infrastructure teams including Town Planning, Plumbing and MPW;
- Crew Support, Volunteer and other teams whose work overlaps with Sanitation;
- Sanitation Shift Leads and event volunteers;
- Site Office and relevant onsite operations teams;
- Site Safety / Health & Safety teams where required;
- External contractors and suppliers as required;

The relevant Co-Lead may communicate directly with another team or department regarding their area of work; communication does not need to be routed through a single Sanitation representative.

How Much Time Will I Need To Commit?

Year-Round

Time commitments are indicative and vary by focus area and time of year. Approximately 1–3 hours per week on average. From September–January this may increase to approximately 5–10+ hours per week, while February–April (post-event) may be approximately 2–5 hours per week.

Busiest Time

December–January is generally the busiest period, particularly around recruitment, planning, Build and final event readiness at approximately 10+ hours per week, with Co-Leads taking significant Build responsibility may be contributing several hours per day while onsite.

Quietest Time

May–August is generally quieter, at approximately 1–2 hours per fortnight for some Co-Leads, while Stewardship, working-bee or project-based responsibilities may require additional time.

On Site

- **Prebuild -** Not every Co-Lead is expected to attend the entire Build. Onsite responsibilities may be distributed or rotated between Co-Leads from year to year according to availability, interest, experience, capability and team planning. Some Co-Leads may arrive substantially earlier than others where their responsibilities require it.
- **Event -** Co-Leads are expected to attend the Kiwiburn event. Where attendance is not possible, this should be discussed in advance and adequate leadership coverage agreed with the wider Co-Lead team and Infrastructure Facilitator

should be set up. Attending Co-Leads participate in the shared Duty Lead/on-call roster, training and operational support. Duty Lead allocation should take account of each person's overall year-round, Build, event and Packdown contribution, availability and recovery needs so that workload remains equitable.

- **Postbuild -** Sufficient Sanitation leadership is expected to remain onsite while services continue and Sanitation assets are cleaned, collected or stored. Not every Co-Lead is expected to remain for the full Packdown period.
- **Other -** Co-Leads may attend working bees, planning visits or other site activities relevant to their focus area. Appropriate coverage is agreed within the Co-Lead team.
